EXPERIENCE:

Frontend Engineer / Founder – LUNA AI

California | Feb 2025 – Present

- Built LUNA end-to-end as sole frontend engineer — an AI email workspace spanning inbox, search, compose, actions, and contacts workflows.
- Architected the frontend from scratch in Next.js, React, and TypeScript, defining routing, state patterns, component structure, and API contracts.
- Created a reusable frontend system using shared components, focused hooks, and consistent interaction patterns.
- Designed a dense, responsive multi-pane interface in Tailwind CSS, bringing structure and clarity to complex AI email workflows.
- Hardened untrusted Gmail HTML rendering with DOMPurify, CSP nonces, sandboxed iframes, and verified postMessage resizing.

Freelance Frontend Engineer – Pinnacle Studios

California | Jan 2022 – Feb 2025

- Built client-facing React and Next.js websites, translating design files into pixel-accurate, responsive interfaces.
- Developed interactive dashboards and data visualizations with Recharts, turning complex client data into clear, explorable views.
- Created reusable TypeScript component systems, improving UI consistency and delivery speed across client projects.
- Improved performance and accessibility across responsive, cross-browser builds through semantic HTML, ARIA, and frontend optimization.

CERTIFICATIONS:

- | | |
|---|---------------------|
| • Google UX Design Professional Certification - Coursera | Aug 2022 - Nov 2022 |
| • Journey Mapping - Interaction Design Foundation | Jan 2023 - Feb 2023 |
| • Memory and Perception in HCI and UX - Interaction Design Foundation | Jan 2023 - Feb 2023 |

EDUCATION:

- | | |
|---|-------------------------|
| • BS in Computer Science – San Francisco State University (GPA 4.0) | Expected in Spring 2027 |
|---|-------------------------|

SKILLS:

TypeScript, JavaScript, React, Next.js, HTML, CSS, Tailwind CSS, reusable component systems, data visualization (Recharts), web accessibility (ARIA, semantic HTML), cross-functional collaboration, attention to detail, teamwork, self-starter, Git, GitHub, and API integration.
